AI PORTFOLIO PROJECT | TRAVEL

WanderGlobe

An AI travel agent that plans your trip on a 3D globe and previews it as a cinematic flyover.

The problem

Trip planning means 20 open tabs: blogs, maps, flights, hotels. Itineraries are text lists that don't show how places connect or how much time you'll spend in transit.

The concept

Say '10 days in Japan in April, I love food and hiking, budget 2000 dollars'. An agent researches, builds a day-by-day plan and plots it on a photoreal 3D globe. Press play and the camera does a cinematic flyover of your route with narration. Drag a pin to change a stop and the agent re-plans travel times and budget around it.

Core features

- Conversational planning agent with web search and maps tools
- Interactive 3D globe with arcs between stops and day-by-day timeline
- Cinematic flyover preview with AI narration
- Drag-to-replan with live budget and travel-time updates
- Collaborative trip boards where friends vote on activities

Signature UI / UX moments

- Globe that zooms from space to street level with smooth camera easing
- Glass panel itinerary that syncs with the camera as you scroll through days
- Budget meter that animates as you add or remove activities

Tech stack

Next.js + Mapbox GL / Cesium / Google Photorealistic 3D Tiles
AI SDK agent with tools: search, places, routing, weather
Text-to-speech for narration
Neon Postgres for trips
Liveblocks for collaborative boards

How the AI works

A planning agent loop calls tools for places, routing and weather, then outputs a typed itinerary (days, stops, coordinates, times, costs). The globe renders purely from that itinerary JSON, so every agent update instantly re-renders the map.

4-week MVP roadmap

Week 1	Globe with arcs and markers from a static itinerary JSON
Week 2	Planning agent with tools producing the itinerary schema
Week 3	Timeline sync, drag-to-replan, budget meter
Week 4	Cinematic flyover with narration, sharing

Stretch goals

- Live flight and hotel prices
- Offline trip pack PDF
- Post-trip memory reel from your photos

Why it impresses hiring managers
Agentic tool use plus geospatial 3D is a rare combo. The flyover video alone is a scroll-stopper on LinkedIn.

30-second demo script
Type one sentence about Japan. The globe spins, arcs draw from Tokyo to Kyoto to Hakone. Press play and fly through the trip with narration.
